PRESIDENTIAL RAMBLINGS

CAPITAL FEAST

Things are really shaping up for our Capital Feast next May. The work is beginning in earnest especially with regards to notifying vendors about it and to gathering literature on what to do and see in Washington that can be given to the computer widows or widowers. Audrey Curnutt will give us an update on things at the November meeting. I am sure that Audrey and the rest of the committee would appreciate any help they can get; so, if you want to help in a large or small way, join up now and get in on the ground floor!

CATS BBS

Your Executive Board voted unanimously to accept Steve Green's written proposal with some provisio's to

set up an electronic Bulletin Board for CATS. This BBS can be very useful to the club and for conveying information on the Capital Feast. More details are contained in the notes on the Executive Board meeting found later in this issue.

MISCELLANY

Tom Bent shared with those of us assembled at the October meeting the news that Digital Precision was working on an MS-DOS emulator for the QL. His sources indicated that it was due out in several months. Tom also mentioned that the disk controller chips were back ordered but would be shipped shortly. Vernon has ordered the anti-bounce

keyboard chip for the QL's.

Hope to see you at the meeting.

Bill

Happy Thanksgiving

FROM THE EDITOR

Well, it's that time again, when you can tell the Editor by looking for the person with one eye glued on the computer screen and the other on the calendar with the deadlines marked in red. For our members and readers "outside the Beltway", I would suggest that they not call their Washington, DC friends on Sunday, at least for the next two months. You see, this is a football town and we are all praying for a minor miracle on the next seven Sundays as the Redskins play the toughest second half schedule in the NFL. Even computers play second fiddle to the 'Skins. " So," you ask, "what has this got to do with me?"

Directly, unless you are endowed with Season Tickets, nothing. Indirectly, everything. We need this type zeal for our Fest in May. There is much to do and not a great deal of time to do it. By the time that you get this newsletter, there will be about 6 months till the Golden Weekend. We need everybody to contribute whatever they can and, if they do, the Fest will be a success. The biggest problem, as I see it, is that the contribution needs to be in the form of direct participation, something we all can seem to find some excuse for not giving. We really need your help. The old adage that "You CAN make the difference" is really true in this case. This issue is the newsletter equivalent of a "slow news day" and I guess I'm thankful for the respite so that I can get caught up with all of the articles that I said would be continued "in the next issue". It makes me apprehensive because the sparse offerings of the members might indicate a permanent drying up of contributions. Boys and girls, DON'T DO THIS TO ME! I am your friend and my cardiologist says that this kind of suspense is not good. Let's keep sending in those cards and letters. You've been really good in the past, so I'm hoping that this is just temporary.

THE CHIP BUY

The order has been placed for 32 keyboard anti-rollover chips. If you didn't sign up at the meeting or send me your name in the mail, you didn't get in on the buy. I don't know if we will get dunned for Customs charges, so I'm not sure how much the final price will be, but it should be around \$14-15. Several people payed so, if the costs are less, we will send refund checks.

THE NEWSLETTER

Like the Marines, I'm looking for a "few good men" but unlike the Corps, I'll settle for just ONE! I intend to turn over the reigns next June, so it is imperative that someone step forward and volunteer. If we do this right, the transition should be smooth. No you don't have to have an Atari ST to do the job. My picks for the two best, The BoSTUG Sinclair Timex Newsletter and the ZXAppeal aren't, yet they pack more information to the page than all of the rest!

MAILBAG USERS ALERT

Please see Page 3 for special instructions.

THIS ISSUE

Inside, we have our usual eclectic offering. Herb Schaaf has reviewed the Nucleon suite of programs from France. He looks at it from the point of a first time user and those that are new to the QL can benefit from his experiences. Duane Parker has developed some utilities for you to include in your own programs. Pieter van Dijk continues with his series on the Z88, this time on file transfers from the QL to the Z88. Pieter is also this month's speaker and I am looking forward to learning more about the Z80. We have a new contributor, Charles Reise, from St. Louis and he has submitted a checkbook program. Catching up on old business, we have the second part of Mike Mitchell's RAMDisk article started in the September issue. If you

are into packet radio you definitely need to read Bob Diggs' article on packet radio with the QL. Right now Bob is doing what I'd like to be doing, cruising down the Inland Waterway to Florida on his sailboat. Boy, some guys have all the luck! Last but not least, I thought you'd like to look at the work of our premier Treasurer, Ruth Fegley. Her monthly report is the reason that our financial condition is as good as it is. That's about it, except for my monthly appeal for ARTICLES. I'll add to it this month by asking for ASCII files (instead of printing them to paper, print them to file so the gain a .lis extension). This saves me the time required to load Quill and then making a .lis file myself. MS-DOS types can send me .txt files. Thanks.

I hope you enjoy the issue.

Key Dates

NOVEMBER

- 12 General Membership Meeting
- 22 Executive Board Meeting
- 24 THANKSGIVING
- 25 December Newsletter DEADLINE

DECEMBER

- 10 General Membership Meeting
- 20 Executive Board Meeting
- 25 CHRISTMAS
- 30 January Newsletter DEADLINE

NEWSLETTER SUBMISSIONS

Submissions for the newsletter can be in hard copy, with columns 2 1/4 inches wide or, preferably, magnetic media. For the QL, microdrive cartridge, 5 1/4" DS/DD or Quad density disks, or 3 1/2" disks. For the ZX81, TS1000, or 2068, cassettes only, with titles on the box.

Send material to:

POTPOURRI

News Around the Beltway

MAILBAG ALERT

Peter Hale, one of the Boston Sinclair Timex User Group (BoSTUG) gurus has written us about some minor errors in his excellent program MAIL-BAG. In case you didn't know it, Peter is also the author of TAX-I-QL and TAX-I-QL/87, the only tax program written for the QL and a major applications program in its own right. I hope that there is a TAX-I-QL/88 in the works! Here's what he says:

Any member of CATS who purchased EMSOFT's MAILBAG, an address database for the QL, prior to November 1, 1988, is invited to return the original for free replacement with a copy free of minor errors that may detract from the full enjoyment of the program. Forward the original medium to EMSOFT, P.O. Box 8763, Boston, MA 02114. Please include your return address.

Ed. Note—Don't you wish all the software developers/distributors treated their customers this way?

NOVEMBER MEETING AGENDA

- 11:00 Hardware Workshop
- 12:00 CYA Workshop
- 1:00 Lunch
- 2:00 General Meeting
- 2:45 The Z88—Pieter van Dijk
- 3:30 Open Discussion
- 4:30 Adjourn

NOTE: Mark Steuber (Mr. QL) from Sharp's will be at the meeting to talk about the Z88 and show off many QL goodies. *If you have any questions for Mark, now is the time to ask them and, just think, it doesn't cost you for a long distance call!*

GET READY FOR THE CATS CHRISTMAS PARTY

If you haven't been to the December meetings the last two years, you've missed the annual Christmas party. Hank Dickson will have an in depth article in next month's newsletter; however, I will try to whet your appetite. You should be looking around for a suitable Timex/Sinclair gift for the gift exchange. It could be a piece of software or a hardware item. Let your imagination go. Remember, mark December 12th down on your calendar.

DON'T MISS IT!

Executive Rumblings

10-18-88

Notes from the Executive Meeting

First, for all you BBS users, C.A.T.S will go on line!!! Thanks to Steve Greene's talk on "Telecomputing with Timex Sinclair Computers", last month, we are establishing a BBS.

Who'll be SYSOP and what the number will be, is still to be worked out. Stay tuned.

S.M.U.G. was next on our list. We'll give it a try.

Audrey Curnutt is now the Chairperson of the Computer Feast, Bob Curnutt, Secretary, and Stan Guttenberg is our Treasurer.

A Personal Note--
My thanks to James Wilson of Arkon, Ohio for your help. I hope you have VHS, because I'm sending you a tape of one of our meetings.

The CATS Executive Board and the Newsletter Staff would like to wish everyone a Happy Thanksgiving.

Drive Safely

TAPE LIBRARY INFORMATION

The C.A.T.S. tape library is available to all full (\$18) members. Prices, per cassette, are \$3.00 by mail or \$1.00 at the meeting.

C.A.T.S. does not have Public Domain software for sale.

Mail order requests, and submissions for publication, should be sent to the tape librarian:

Rev. John Riley

120 N. Fairlawn Dr.

Carrollton, GA 30117

Checks or money orders should be made payable to C.A.T.S.

We will continue to "compensate" contributors with one free cassette from the library.

HAPPY HOLIDAYS

QL on the QT

by Vernon Smith

Compared to other months, the news is rather sparse. Just two items.

QL EMULATOR FOR ATARI

Strong Computing the Welsh software/hardware vendor is selling an emulator for the Atari ST that will allow the user to run QL programs. It was reviewed favorably in the latest issue of QUANTA and the October issue of QL World. From the sound it, I would say that it is the best of both worlds. I've been on order for one for the last two months and Strong said that they'd shipped it. Is that the Welsh equivalent of "your check is in the mail"? Anyway, I hope to have it up and running by the time I write this column for December. It is both a hardware add-in and a software patch. The hardware board requires that the existing shielding be removed and this may be the reason you probably won't see the unit marketed in the US since the Atari might not pass the FCC standards. The second reason that I believe it will mostly be a novelty here, and maybe in the rest of the world as well, is that it needs a ZX8301 chip to run. Existing QL owners should have no problem since they can pop the one out of their machine. The unit is sold sans ZX8301. Strong said that they need 1000 (!) of these chips, alone, for the emulator and QL needs. PV Tubes is out of stock as well. The rest of the world could probably use that many, and then some. The key, unfortunately, may be Alan Sugar (Mr Amstrad), and with his hostility towards all things QL, what a neat way to finally torpedo the machine that makes his MS-DOS machines look bad. Proprietary chips may be great but when you have an orphan computer it spells disaster, a la the 2068.

DIGITAL PRECISION UPGRADES PROGRAMS

Digital Precision is in the process of upgrading some of their programs. DP is one of the major software houses in the UK for the QL and, to me, this

CATS NEWSLETTER

sends two signals, one favorable and the other just so-so. First, DP is into the QL for the long haul. They couldn't hope to amortize the cost of the upgrades if they don't stick around. The second signal is harder to interpret. Upgraded software may help to drive out the weaker software houses, which could eliminate the competition and allow DP to raise their prices. I hear that one of the programs to be upgraded is Desktop Publisher and that, among other things, the global page layout will be a higher resolution. I hope that they do more than this, especially in the text entry area. I will be anxiously awaiting its debut. One point should be made in DP's favor and that is they have been uncharacteristically silent about these developments. I hope this is a marketing strategy rather than an indication that the upgrades are "vaporware", probably never to see the light of day. Keep your fingers crossed.

I don't know how many of you are using 3 1/2" drives, probably very few; however, for those that are DS/DD disk prices are down to 85 cents each and they are no longer in short supply. Call MEI (800 634-3478). They also have excellent prices on printer ribbons and 5 1/4" disks.

Several months ago I received Text87, a new WYSIWYG word processing program. Due to the press of business I've not been able to become proficient enough to give it a fair review. In keeping with my policy of never taking the word of another reviewer or incorporating advertising copy into my evaluation, I will hold off for the time being.

Page 4

QL 'n PACKET

by Bob Diggs

Alex in July, "Friends of QZX", told the readers I was trying to put my QL on Packet. I am proud to say that I have done it and since there seems to be so little written about it I'll tell what I know and hope the ball will start to roll and more knowledgeable people will fill in the gaps.

My Packet activity has been limited to 2 meter using an MFJ-1270B TNC connected to Ser2. I have the unexpanded QL, no floppies, just microdrives. I use two programs: QLTerm by Richard Moldavan and Mike_term from April QZX. Each has a special use, each has different problems and neither is completely satisfactory. However, I am using my QL on Packet and it is available whenever I want it! Ser1 goes to my CITIZEN 120D printer and Ser2 is connected to my TNC.

My old setup used either the T/S 1000 or 1500, COMLINK II, and an Alphaacom 32 printer. A very satisfactory set up, indeed, primarily because I could dump the screen to the printer, something I can't do with my QL. I still use the 1500 on occasion but the keyboard and a few other things about this great computer have put it on the back burner.

I ordered my QL just before we took off for South Africa last December and had it shipped to Florida where it is better for us ole folk in the winter. Incidentally, I had a ball operating in one of the new tribal homelands, The Republic of Ciskei, as S42Q. But that's another story. When we got back in mid January, there it was - a real sophisticated computer for an ole fogey, who had to start all over again. And, incidentally, this story is coming by way of Quill on my QL and CITIZEN 120D printer.

I had no idea how to run the machine much less get on Packet. I used my T/S 1000 with only moderate success. I need a better antenna system in Florida, for sure. This year we will go there on our sailboat and I'm sure the antenna up fifty feet will do better.

I went to the Winterfest at Orlando hoping to get information about Packet only to be asked by almost everyone, "What's packet?" All was not lost because I was guided toward QLTerm and learned the Ser2 pins are not as shown in QLUG. That became academic because I bought a standard cable and it works just fine. Before leaving the Winterfest I ordered QLTerm from Sharp's, because if it worked so well on a modem, then it was bound to work on Packet.

My first attempt at QL'n Packet and QLTerm was a big disappointment because I was using TV instead of a monitor. I called Sharp's to find out

November 1988

QIL UTILITIES by Dick Parker

A Menu Driven Selection Program

Some utilities are used time and again in one's computer operations. Each of us has our favorite utilities. This program presents a menu program which will allow easy selection from a group of these utility programs residing at the bottom of memory. It is a defined procedure which calls a number of other procedures. These other procedures are your choice utilities. For illustrative purposes, a few such procedures are included in the program listing.

A call to this program can be put in your boot routine to provide an automatic initialization with the menu. Arrow keys or number keys will move you about the menu in the normal fashion. Keying ENTER on the desired highlighted strip will obtain the desired utility. Some utilities can return you to the menu. Study the code to see how it can be modified to your needs.

The screen dimensions shown in the program are for use on a RGB monitor. A TV would use a screen 455x200 instead of 511x255 with appropriate offsets to center it. The menu selection code is contained in the first 87 lines of the program. Blanks are critical only in the two lines containing START and STOP and may need to be changed to fit your screen. The first six procs are original to me. The others are modifications of code from various sources.

Z88 PROGRAMS, TIPS, AND OTHER USEFUL INFO

by Pieter van Dijk

Useful information for the users of Uncle Clive's newest computer

Transfer of files from the QL to the Z88.

This program can be used to send files to the Z88 from the QL, using the Import menu. I tried to use several methods of sending strings directly, but with my QL I received too many bad characters in the Z88 file. Therefore this program sends the file character by character and even a small pause had to be added to obtain flawless files. I have no idea why this is needed as transfer in the opposite direction does not have this problem. Maybe it is my machine?

To avoid bad characters, start the Import program on the Z88 before the data transmission from the QL.

Line 220 is sent at the end of the file to inform the Z88 that the end of the file is reached.

QL'n Packet

Continued from Page 4

if my problem was the TV connection. He was sorry, of course, but that was the trouble and it was my problem. Someday I'll write to Mr Moldovan and find out how to modify his program for TV. I prefer to use the monitor, however, when operating from a sailboat, the TV is available and the monitor is excess baggage. I had hoped that QZX and CTM would be forwarded to me and those reliable sources would get me started. No such luck, these were not forwarded and I would have to wait 'til I got home to learn the published word. So that was the end of my QL'n Packet activity

in Florida. My attention then went to finding a printer I could afford and liked. I have been pleased with this CITIZEN and the price was right!

Back home in Maryland, I found out that the USMail had fouled me up by not saving any periodicals such as QZX and CTM. All that packet information down the drain? Baloney! There wasn't any as I found out when I had the back issues replaced. The April QZX arrived in May (Alex that was one time I was glad you were late!) with a program by Michael Mitchell. Another disappointment; it needed a monitor and I didn't know how to change it for TV.

In July - I GOT A MONITOR! Now I could do everything! So, enough of the preliminaries, let me tell you what happened.

QLTerm (Monitor required)

When I first ran this it worked OK, but there seemed to be a problem between the computer and the TNC. They just didn't want to communicate without messing up some of the characters. Packets went out OK in spite of the garbage on the screen. I left it alone for a period while I played with Mike_term and tried to solve problems I had with that program. No luck. Back to QLterm.

I was on packet with my T/S 1500 and COMLINK II and doing OK with a baud 300 as required by the COMLINK. My idea was, to use either computer,

I had to use baud 300. QLterm allows other baud rates and, with Mike_term in mind (either 300 or 1200), I set the TNC to 1200 baud and stopped using the 1500/COMLINK.

What a difference a baud makes! The garbage dissappeared from the screen.

At last I had a program working. The first time I tried to delete - no luck. I found <CTRL-H> did the job. I also had to learn to use F5 to get from converse to command. The screen filled so fast, I had to use <CNTRL-S> well in advance to stop and read the screen. There is no screen dump as you have with the COMLINK. I suppose there is software I can buy to do this. I wish I had such a program. To open a file you must name the device, ie: "mdv1_itm" to open a file for WSITM-9. The next problem is how to read the file. I tried: "COPY mdv1_itm to scr". The lines flew by so fast there was no way to read them. There had to be a good way; the program I use to read my files is:

```
10 REMark read file
20 WINDOW 465,204,6,0
30 INPUT "Enter a file:" ! a$
40 OPEN IN #6,a$
50 FOR record = 1 TO 200
60   INPUT #6,item$
70   PRINT ! item$ !
80   PAUSE
90 END FOR record
100 CLOSE #6
```

Remember, a\$ must name a device, such as mdv2_filename; line 80 scrolls one line at a time, using the space bar.

Using QLterm to make a file is not the easiest thing. It goes like this:

- 1 Enter <CNTRL-S> to halt the display
- 2 Enter program command mode via F3
- 3 Open file, device_file name
- 4 Return to terminal mode
- 5 Enter <CNTRL-Q> to resume output from your TNC to your computer
- 6 After file information is completed, enter <CNTRL-S>
- 7 Enter command mode via F3
- 8 Close file.
- 9 Quit or return to terminal mode

Then, if you want to read the file you have to go to super basic, etc. That's why I need a screen dump in the program. I do have on file such things as SENodes, showing path from North Carolina to Florida, for example.

Mike_term

This program is the one I use most of the time. I only use qlterm if I think I want to make a file. I had my troubles when I started because I copied the program wrong. I had overlooked the ";" at the end of line 270. It was wierd to see one character at a time scrolling up the left edge of the screen. Once the missing semicolon was in place, things looked better but there was no cursor and the normal delete/backspace printed a "B"!

Delete/backspace is <CNTRL-H>, but

without a cursor, it's hard to use. I use <CNTRL-X> and start the line over or include the mistake if it's not too bad. I can not find any way to get a cursor on the screen.

I changed the window and a few minor items for TV and it works just fine. This program needs a screen dump and a file procedure would be a fine thing if it were not too complicated. I like this program because it loads fast and goes to superbasic with no problems.

To be concluded next month

CYA WORKSHOP

We will review the last two sessions

to bring us all up to equal par. In addition we expect to narrow our selection of economic indicators to the most useful based on my

study of interest rates, inflation rates, money supplies, GNP and stock market indices. We should have about 3/4 th of our data base available and updated through October for copy by interested parties. If you have not sat in on our chats and excercises, do so.

QL Software Review

by Herb Schaaf

Review of program collection Nucleon by Pyramide for the QL.

So far I've been mostly confused by the documentation, which seems to have been loosely translated from the French with emphasis on the feeling and mood more than literal and technical meaning. Something more is also lost in translation, because there are demonstrations listed in the directory that aren't mentioned in the documentation. Even so, it looks like an interesting group of programs and it will be fun trying to decipher them.

Well, guess what? There's also an update_doc file shown by the directory and when I looked there I found a nice

explanation that helps clear up some of the confusion. Is that fairly common in QL programs? (ED NOTE: Yes. It is now becoming more common, especially when programs are updated and the changes don't warrant the expense of printing new documentation. The file might also be titled README_doc.) If not, I think it could be a nice touch to any programs you write, both for yourself and for others. I wish I had done a better job of documenting my ZX81 and 2068 programs, and the QL sure makes it easier to put all my rambling thoughts into a Quill_doc file instead of a few brief (and now somewhat obscure) REM statements.

There's been a slight delay while I took the QL apart to see if I can do anything about its annoying way of

crashing after it has been running for an hour or two. Bopping it would bring it back to life temporarily, but all work in progress was lost. I never knew what that little kluge board on the white silicone rubber was for (and still don't) but it looked like a good thing to mess with. When I flipped it over there was a loose wire, just the sort of thing to make intermittent trouble. Now it is securely soldered, and all its cousins too just for good measure. I sure hope that was the problem — time will tell. At least my QL can now take a bopping and keeps on hopping. Remember when they took a licking and kept on ticking? Now I wonder how many trims you can take out of the tender keyboard tails that are so fragile. (ED NOTE: See page 11 for replacement membranes.) I'm thinking of trying some way to reinforce it so it can meet the CATS working environment of frequent internal modifications—why don't we just use velcro to hold the case together? Some of the screws have begun to lose their grip, they've been in and out so often!

Live and learn! Another set of Pyramide programs called BAG OF TRICKS came in and I trashed it by trying to first get the directory and then read the _doc file with QUILL. What happened was that it wrote the def tmp over some of the major programs. Not a nice TRICK at all! When I let the cartridge boot itself the first screen warned me to make a copy of the _doc files to another cartridge before reading them. Too late! (Mark of Sharp's said I could send it back for a replacement.)

On the other Pyramide program 'NUCLEON' there is a program called the INTEGRATOR that lets you do a lot of neat things with the mdv cartridges or flip floppy disks if you have them, like a full screen directory, formatting, change names, look at files (probably non-destructively too!), do selective deletion or copying, a handy all-copy command, create boots, merge and maybe more as I learn about it. It seems to crash if you try to use it to do anything with copy-protected files, but sure is nice for
